

ALFABLOC® CONCRETE RETAINING WALLS

The AlfaBloc® is a structurally efficient and versatile concept that offers a flexible solution for your bulk storage needs. It can be loaded on one or both sides and because it can be used without fixings bay sizes can be altered in a matter of minutes.

The AlfaBloc® is the only 'A' shape, interconnecting freestanding precast concrete wall system on the market. Its patented jointed mechanism aids in the spread of the load horizontally against the units. It is designed to be freestanding for the majority of uses, but can also be ground fixed for higher loading applications.

Requiring only a structurally solid base to sit on, the precast concrete wall units can be used in a variety of applications. Units come in six sizes from 1.2m to 6.0m and can weigh up to 5.2 tonnes. The AlfaBloc® has been tried and tested over many years of constant use and can withstand significant impact by mechanical plant as well as withstanding extreme weather conditions. AlfaBlocs® are used in many sectors including Agriculture, Waste & Recycling, Ports & Shipping etc.

Alfabloc® has many advantages as a retaining wall solution:

- The biggest and most powerful advantage is the ability to connect the blocks and create one solid wall which is why it out performs the competition
- Easily transported
- Can be lifted without chains or shackles
- Fast & easy one-man installation
- Easily configured meaning you can change the layout in minutes
- No protruding toe (means the loading shovel won't catch)
- Easy to clean
- Load one or both sides
- No casting holes to be filled.
- Many different heights available.
